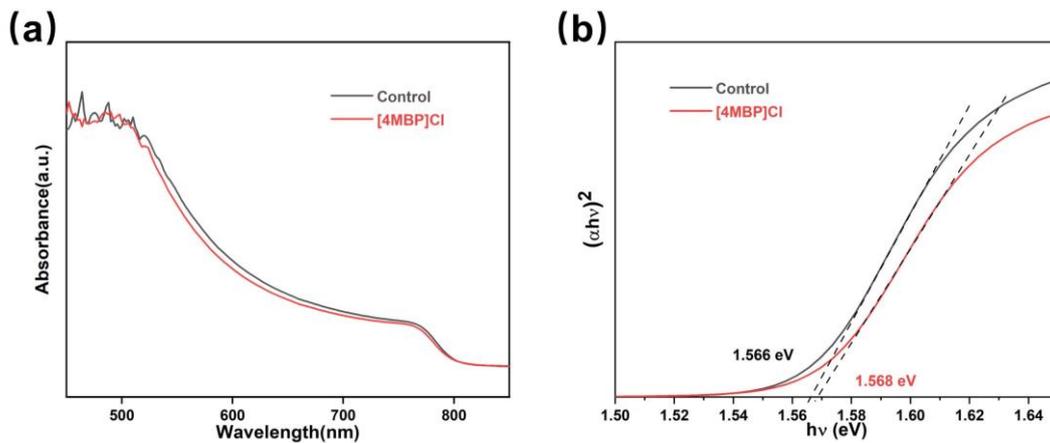

Fig. S8 a) UV-vis absorption spectra of perovskite films without and with 0.5 mol% [4MBP]Cl. b) Tauc plot of the corresponding UV-vis plot of the perovskite films without and with 0.5 mol% [4MBP]Cl

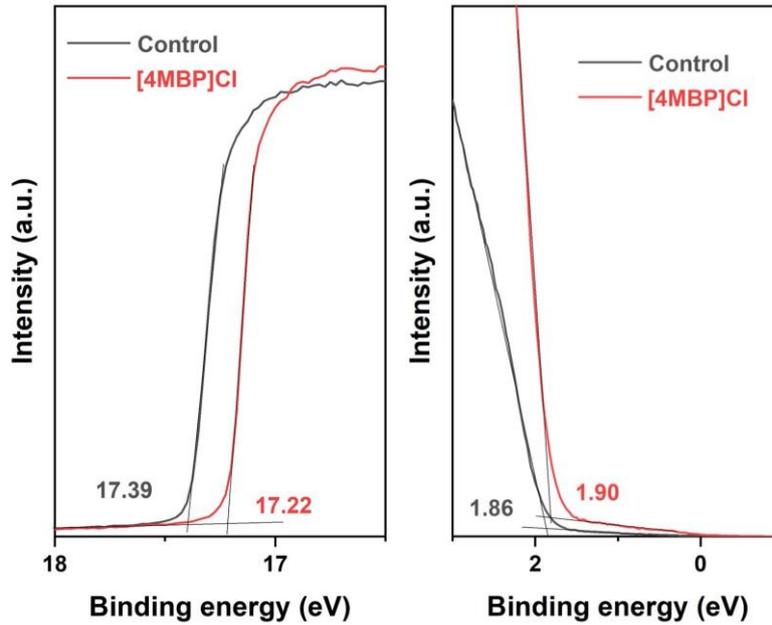

Fig. S9 UPS of perovskite films without and with 0.5 mol% [4MBP]Cl

The Fermi energy level (E_F) and valence band maximum (VBM) can be obtained using the following equations: $E_F = E_{\text{cut-off}} - 21.22$ (1) and $\text{VBM} = -E_F + E_{\text{onset}}$ (2). $E_{\text{cut-off}}$ and E_{onset} are 17.39 and 1.86 eV, respectively, for the control film. Similarly, $E_{\text{cut-off}}$ and E_{onset} of the [4MBP]Cl-modified film are 17.22 and 1.90 eV, respectively. The VBM of control and the [4MBP]Cl-doped films were calculated as -5.69 and -5.90 eV, respectively. Based on the optical energy band gap, the conduction band minimum (CBM) values for the control and [4MBP]Cl-modified film are -4.12 and -4.33 eV, respectively.
